

About 25 kms away from Podgorica towards Kolašin, in the Dromira village, on left side above the road there are several buttresses - ridges with an average height of about 200 metres. Among the buttresses there are several walls of a lesser height. The rock is of a solid quality and the harder line you choose, the rock is of the better quality and cleaner. The approach is easy, no more than 20 minutes from the road to below the rock. There are 8 climbed routes at the moment.
